## 3 License Account

Seismic Source has modernized the licensing procedure so our clients now can issue and manage their own licenses. The Seismic Source License Support Application allows the user to log into their account, view the licenses issued for their products, create licenses, update licenses, and obtain trial versions.

### 3.1 Creation of a License Account

License accounts are created by Seismic Source with the purchase of software. The company's license account may have one or more users, all who can access these licenses and issue them as they see fit.

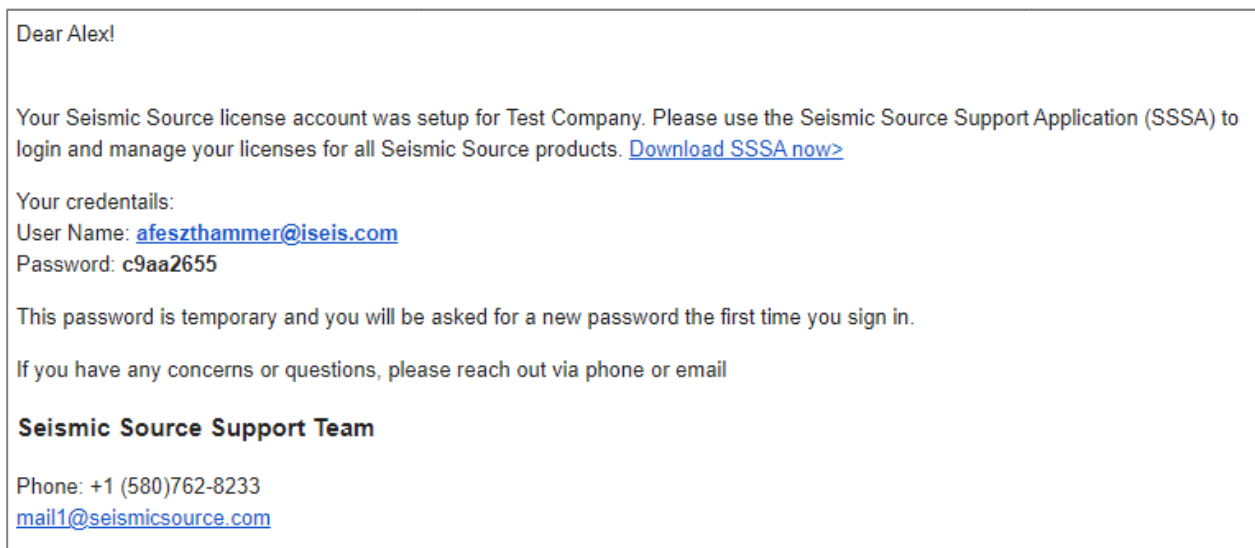

# SSC License Manual

## 3.2 Granted Licenses

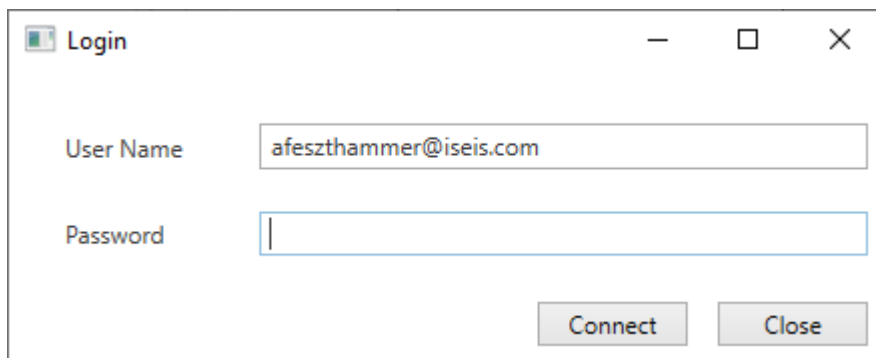

Seismic Source issues licenses to the account holders, and the users that are associated with the license account are notified by email when a license or feature has been added, modified, or extended.

## 3.3 First Time User Login

Once the software purchase is complete and a license account is created, a welcome message is sent to the new user.

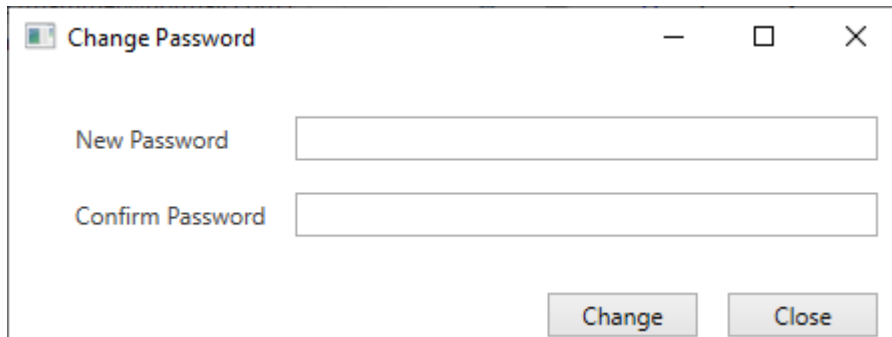

Start the Seismic Source Support Application and enter the username and password as shown in the email.

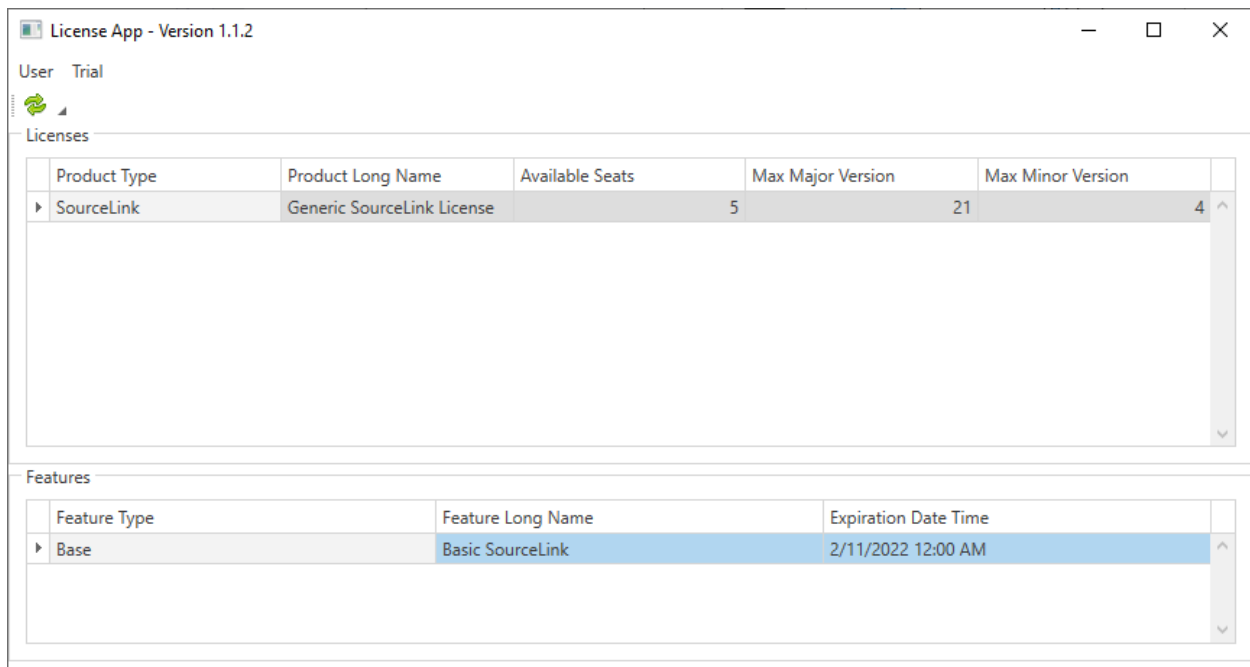

# SSC License Manual

The password is temporary, so after the first login this password must be changed.

A dialog box titled "Change Password" with a close button (X) in the top right corner. It contains two text input fields: "New Password" and "Confirm Password". Below the fields are two buttons: "Change" and "Close".

Once the password is changed, the application will display the licenses that were issued to the organization.

The screenshot shows the "License App - Version 1.1.2" window. At the top, it displays "User: Trial". Below this is a "Licenses" section with a table. The table has columns for Product Type, Product Long Name, Available Seats, Max Major Version, and Max Minor Version. One row is visible: SourceLink, Generic SourceLink License, 5, 21, 4. Below the licenses is a "Features" section with a table. The table has columns for Feature Type, Feature Long Name, and Expiration Date Time. One row is visible: Base, Basic SourceLink, 2/11/2022 12:00 AM.

Product Type	Product Long Name	Available Seats	Max Major Version	Max Minor Version
SourceLink	Generic SourceLink License	5	21	4

Feature Type	Feature Long Name	Expiration Date Time
Base	Basic SourceLink	2/11/2022 12:00 AM

# SSC License Manual

## 3.4 License View

The licenses are listed in the upper grid. Upon selecting one, the bottom grid will display the specific features that are included in that license.

Along with the product name and description, the number of available seats and highest supported version numbers are shown.

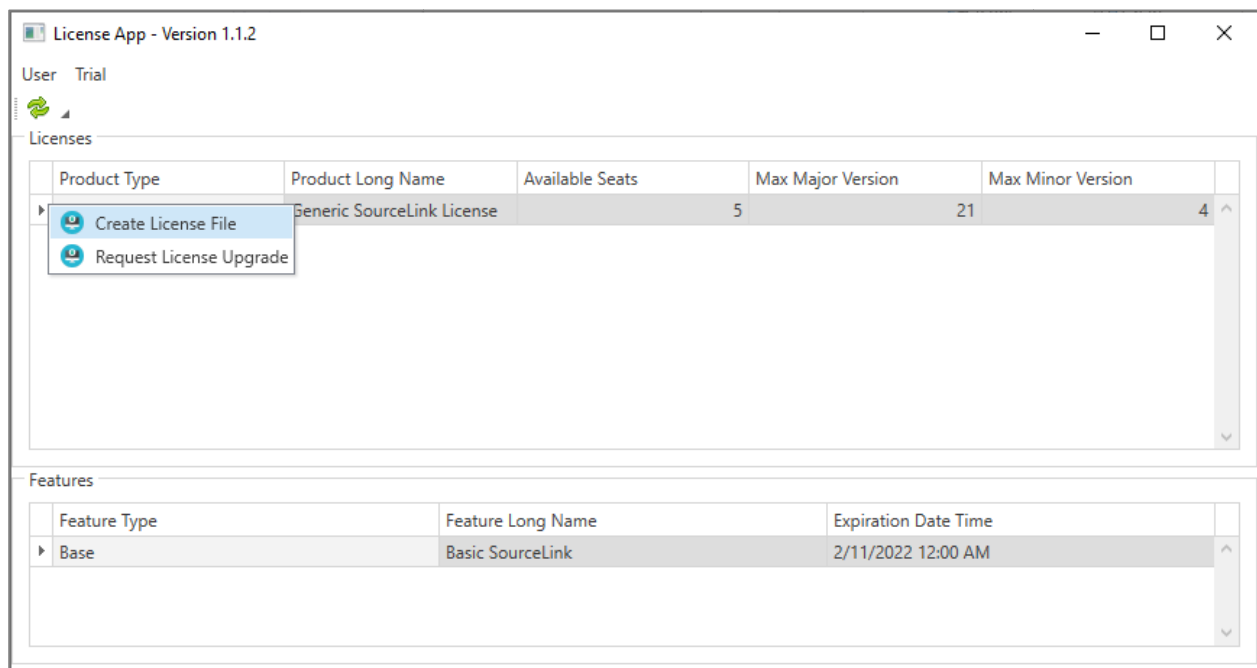

Product Type	Product Long Name	Available Seats	Max Major Version	Max Minor Version
SourceLink	Generic SourceLink License	5	21	4

For each feature, the type, description and expiration date of that feature is displayed.

Feature Type	Feature Long Name	Expiration Date Time
Base	Basic SourceLink	2/11/2022 12:00 AM

## 3.5 Issuing a License

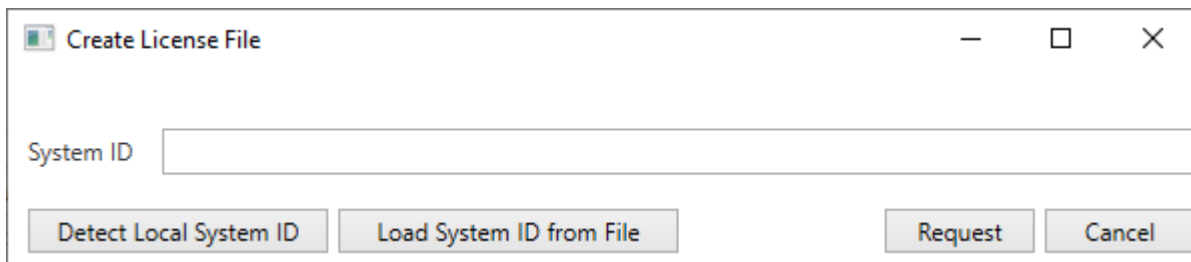

To issue a license for a product, right click on the product and select the **Create License File** option.

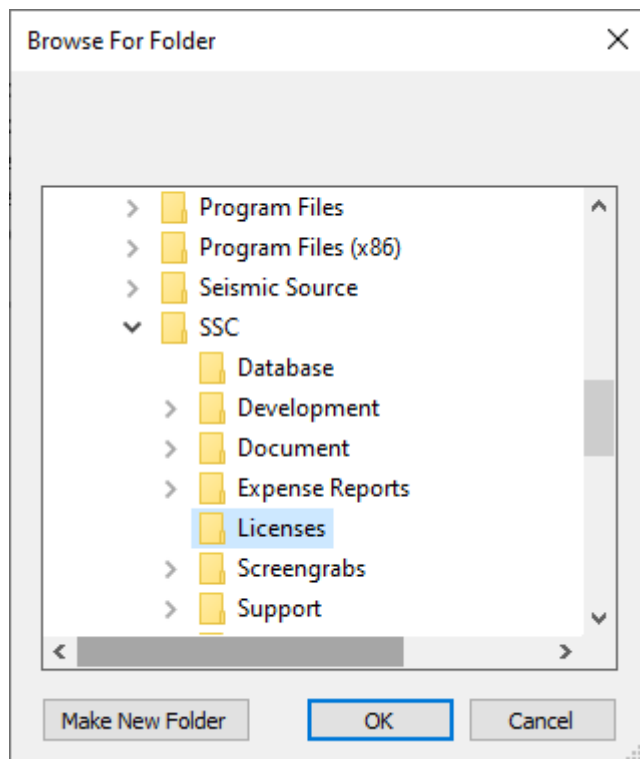

The screenshot shows a window titled "License App - Version 1.1.2" with a user profile for "User Trial". The main area contains a "Licenses" table with one row: "Generic SourceLink License" with 5 seats, major version 21, and minor version 4. A right-click context menu is open over this row, showing "Create License File" and "Request License Upgrade" options. Below the licenses table is a "Features" table with one row: "Basic SourceLink" with an expiration date of "2/11/2022 12:00 AM".

# SSC License Manual

To create a license for a computer, SSC need to know the System ID. This is shown when the application, such as SourceLink is started without a license file. This System ID can be exported as a file and imported into this application. (For the Android products, the System ID is stored in a file called SystemID.txt in the SSC folder in the Internal Storage). The System ID can be manually entered if creating the license for another computer running the Seismic Source Support Application; otherwise the System ID can obtained the ID by clicking on the **Detect Local System ID** button.

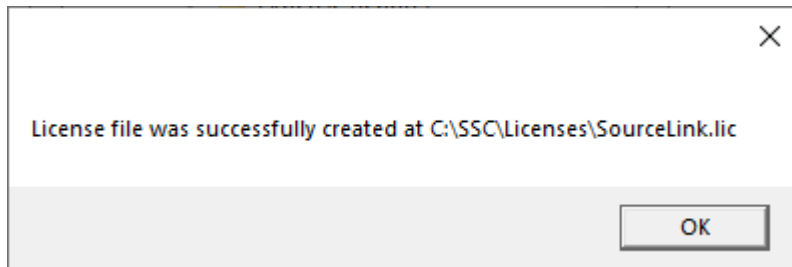

After the System ID is filled in, click on the Request button to initiate the process. Then select the location for the saved license file. The default location is **C:\SSC\Licenses**

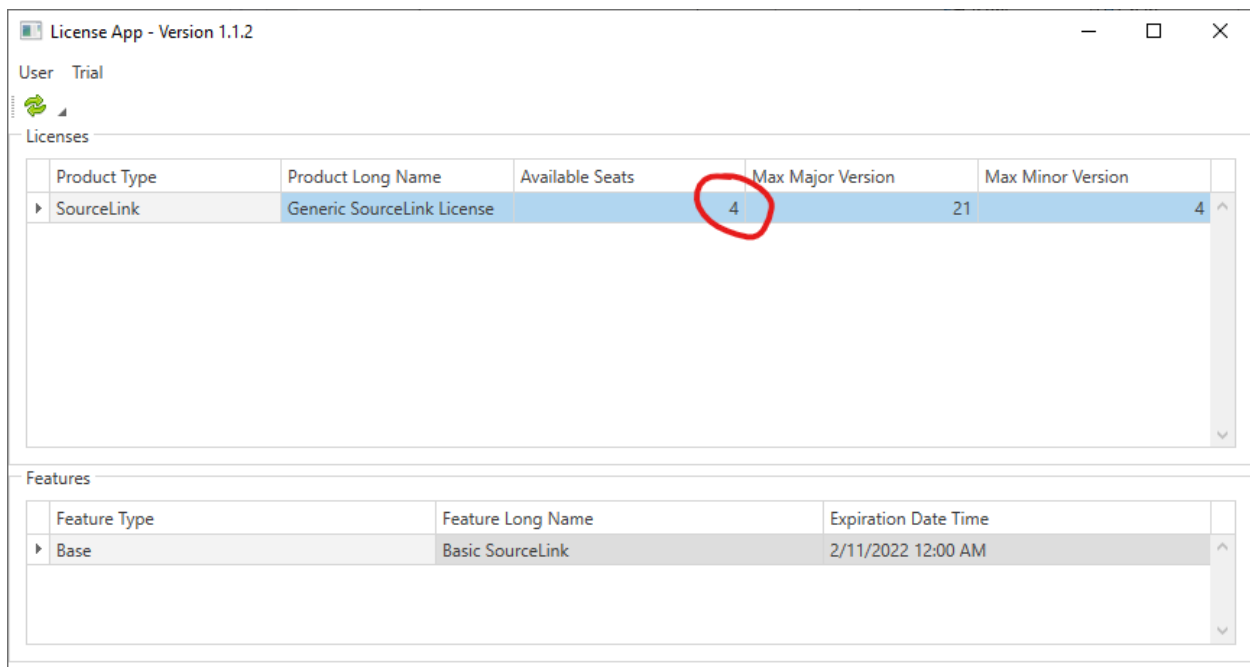

# SSC License Manual

Click OK once the desired location is selected. After the license is obtained from the server, it is saved, and the user is notified.

The license view should now reflect that one of the seats was taken.

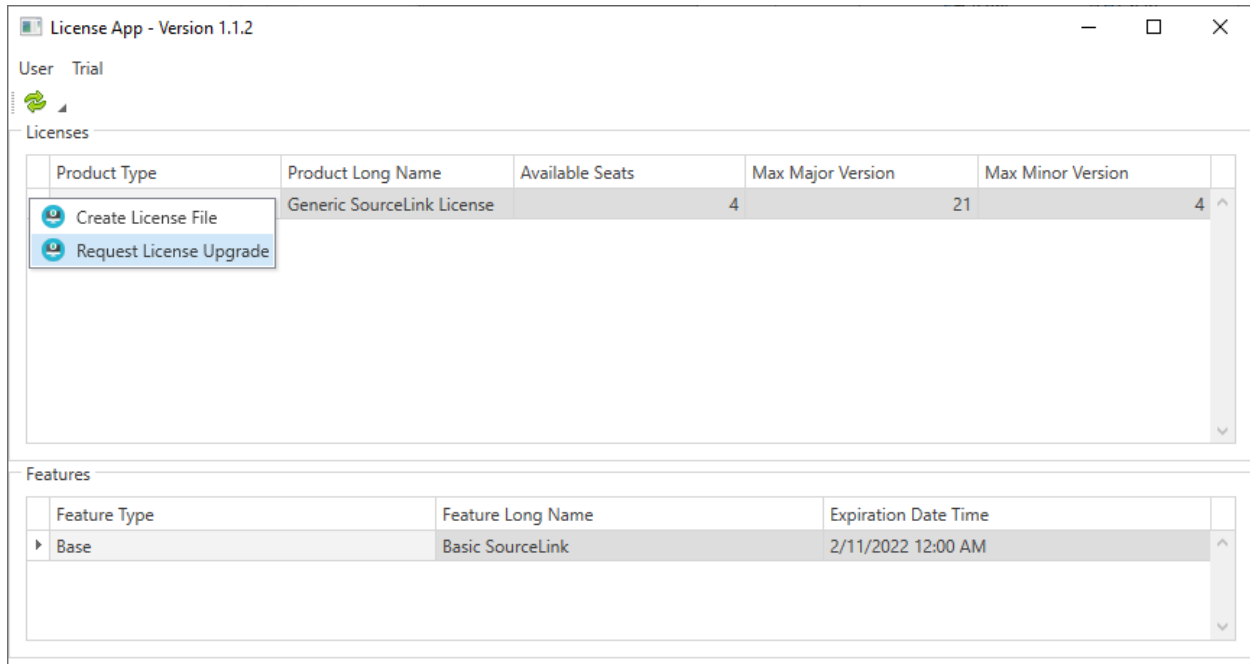

**IMPORTANT!** If the System ID was already used to create a license, the license will be generated without deducting from the number of available seats. License files can always be recreated for the same computer without using up more seats from the allocated licenses.

# SSC License Manual

## 3.6 Upgrading a License

To request an upgrade of license for your product, right click on the product and select the **Request License Upgrade** option.

If you decided not to participate in the Seismic Source Software Maintenance program, but want to try the latest release with a higher version level than is supported by your license, you can obtain a 7-day trial license by requesting the upgrade. The upgrade procedure is the same as the license issue detailed in section 1.4. This license will support the latest release of the product, but will only work for 7 days after it was obtained. You can either save the old license and copy it back if you decide to stick with the old version, or you can regenerate it anytime (see last paragraph of section 1.4).
